Summary

Senior UX Engineer and hands-on frontend architect with 20+ years of experience building user-centric web platforms and AI-powered interfaces. Specializes in bridging design and engineering by rapidly prototyping interactive experiences, translating product ideas into high-fidelity implementations, and enabling teams to validate concepts through working demos.

Experienced in developing AI-driven user experiences, including copilots and workflow automation tools, leveraging LLMs to enhance usability and decision-making. Proven ability to collaborate with designers, product managers, and engineers to shape product direction, accelerate UX innovation, and deliver intuitive, high-impact solutions at scale.

Skills

- **Frontend & UX Engineering**: React, TypeScript, Next.js, Redux, Micro-Frontends, Design Systems, Component Libraries
- **AI & Intelligent Interfaces**: LLMs, AI-assisted workflows, Copilot-style interfaces, prompt engineering, Sapient Slingshot, GitHub Copilot
- **Prototyping & UX Development**: Rapid prototyping (Vite, Next.js), Interaction design implementation (Figma → code), UX experimentation, usability iteration
- **Testing**: Jest, RTL, Cypress
- **Cloud & DevOps**: AWS, Azure, GCP, GitHub Actions, Jenkins
- **Design Systems & Accessibility**: Mantine, Chakra UI, Ant Design, Shadcn/UI, WAVE, AudioEye
- **Performance & Optimization**: Lighthouse, SpeedCurve, Core Web Vitals
- **APIs & Backend**: REST, GraphQL, Java, SQL

Experience

Publicis Sapient | Irvine, California
AI-First UX Engineering Initiative (GMR Platform) – Current Project

- Initiated and drove adoption of AI-first development workflows across the team, improving productivity and enabling rapid experimentation.
- Leading an AI-first development approach using Sapient Slingshot to rapidly prototype and deliver user-centric experiences through automation and intelligent workflows.
- Leveraging Figma-to-code workflows, Jira-integrated development, and custom AI skills to accelerate UI development and reduce manual effort.
- Identified opportunities to reduce user friction in support workflows and designed AI-driven solutions that improved user efficiency and reduced reliance on manual troubleshooting.
- Prototyped agentic AI workflows and copilot-style interfaces for support use cases, simulating automated troubleshooting and improving user efficiency.
- Built reusable AI-driven tools and workflows to accelerate design-to-development cycles and improve cross-functional team productivity.
- Presented interactive prototypes to stakeholders, clearly communicating complex AI-driven concepts and influencing product direction through working demos.
- Reduced UI development effort by ~30% and accelerated development cycles through AI-assisted workflows and automated code generation.
- Improved user efficiency and reduced reliance on support documentation through AI-assisted troubleshooting workflows.

Publicis Sapient | Irvine, California
Front-End Architect
10/2018 - Current

- Led architecture and development of modular web applications for Fortune 500 clients, enabling faster iteration on user experiences and supporting large-scale, high-traffic environments across multiple teams.
- Designed and implemented intuitive user workflows for a large-scale commerce platform, improving usability, reducing user friction, and enhancing task completion efficiency.
- Designed and prototyped AI-driven user experiences leveraging LLMs for intent interpretation and dynamic response generation, enabling intelligent workflows and automation of complex tasks.
- Owned end-to-end development of UX prototypes from concept to production-ready implementations.
- Optimized performance of web applications, reducing page load times by ~20% and improving overall user engagement and experience quality.
- Built internal tools and streamlined workflows to accelerate UX development cycles and improve delivery of user-facing features.
- Built reusable design systems and component libraries, ensuring consistency across user interfaces and enabling rapid prototyping and feature development.
- Led cross-functional collaboration between engineering, product, and design teams, driving alignment on product direction and ensuring scalable execution of user experience solutions.
- Partnered closely with designers to refine interaction patterns and translate UX concepts into high-fidelity implementations, improving usability and user experience.
- Explored 0→1 concepts through rapid prototyping, iterating on interaction models based on feedback to refine user experience.
- Translated exploratory prototypes into actionable product features, influencing roadmap decisions and aligning technical execution with user needs.

Publicis Sapient | Irvine, California
Senior UI Engineer
08/2011 - 10/2018

- Led frontend development for a financial services platform, building scalable SPA applications that improved performance and usability.
- Partnered with designers to translate Figma concepts into high-quality interactive interfaces, ensuring fidelity between design intent and implementation.
- Improved usability and accessibility across applications by implementing consistent UI patterns and adhering to accessibility standards.
- Contributed to enterprise systems using modern JavaScript frameworks, improving operational workflows.
- Introduced CI/CD and testing practices improving delivery quality and reducing regression issues.
- Contributed to backend services and integrations using Java and SQL.

Fidelity International | Gurgaon, Haryana
Consultant
01/2005 - 08/2011

- Developed data visualization tools with a focus on usability and clarity, enabling stakeholders to better interpret complex data and make informed decisions.
- Translated business requirements into scalable technical solutions.
- Developed financial applications and dashboards to enhance data visibility and support decision-making.

Education

B.S. in Computers, Mathematics and Economics — Kurukshetra University
