Manoj Mehta

Senior Front-End Architect | Principal UI Platform Engineer | Developer Experience
Irvine, California | meh.manoj@gmail.com | 949-691-5115 | U.S. Permanent Resident

Architecting scalable UI platforms, micro-frontend ecosystems, and developer experience tooling for large enterprise engineering organizations.

PROFESSIONAL SUMMARY

Senior Front-End Architect and platform engineering leader with ~20 years of experience designing and delivering enterprise-scale digital platforms across financial services, telecom, retail, and healthcare. Specialized in React/TypeScript ecosystems, micro-frontend architectures, GraphQL integrations, and developer platform engineering that enable large engineering organizations to build and ship faster. Hands-on architect who enjoys solving complex UI architecture challenges while enabling strong developer experience through reusable platforms, component libraries, and scalable integration patterns. Recently exploring AI-assisted engineering workflows and LLM integrations to improve developer productivity and accelerate software delivery. Looking to apply this experience in a senior architect or principal individual contributor role focused on building scalable front-end platforms and improving developer experience.

SELECTED ACHIEVEMENTS

Architected front-end platforms supporting millions of users across telecom, financial services, retail, and healthcare organizations.

Enabled 6+ distributed engineering teams to independently build and deploy applications by designing a Module Federation micro-frontend architecture, reducing release coordination time by **~35%.**

Created reusable UI component libraries and shared platform frameworks adopted across enterprise teams, reducing feature development time by **~25%.**

Improved performance of high-traffic digital commerce platforms (including Verizon) by **~20%** through bundle optimization, code splitting, and rendering improvements.

Established CI/CD pipelines and automated release workflows increasing deployment velocity by **~30%** while improving reliability and release consistency.

Introduced AI-assisted engineering workflows (GitHub Copilot and LLM experimentation) improving developer productivity by **~15–20%.**

PROFESSIONAL EXPERIENCE

Senior Front-End Technical Architect

Aug 2011 – Present

- Architect and deliver enterprise-scale front-end and platform systems using React, TypeScript, micro-frontends, and cloud-native engineering practices.
- Provide technical leadership across multiple engineering teams, guiding architecture decisions, platform standards, and developer experience improvements.
- Lead technical direction across telecom, financial services, retail, and healthcare engagements, partnering closely with product, design, backend, QA, and DevOps teams.
- Design reusable UI frameworks, shared component libraries, and platform patterns that improve developer experience, consistency, and speed of delivery across teams.

- Define scalable integration patterns for REST and GraphQL services, including Backend-for-Frontend (BFF) architectures supporting complex enterprise product experiences.
- Implement CI/CD pipelines, release guardrails, and modern DevOps workflows to support reliable, secure, and automated delivery.
- Mentor engineers, review architecture, and drive best practices in performance optimization, maintainability, and platform scalability.

PLATFORMS BUILT

Micro-Frontend Platform — Architected a Module Federation based micro-frontend architecture enabling 6+ teams to independently develop and deploy front-end applications, significantly improving release coordination and team autonomy.

Developer Experience Platform — Designed reusable UI component libraries, shared engineering workflows, and platform patterns adopted across multiple enterprise applications, improving developer productivity and reducing feature delivery time.

UI Architecture Frameworks — Established scalable React and TypeScript architecture standards, reusable design patterns, and performance optimization strategies used across enterprise-scale applications.

Analytics & Visualization Platforms — Built complex analytics interfaces (M.E.L.T and Exposure UI) for financial portfolio analysis supporting large datasets, advanced workflows, and high-performance visualization experiences.

PLATFORM LEADERSHIP

Architected reusable front-end platforms and developer experience tooling adopted across multiple enterprise engineering teams.

Defined architecture standards for React, TypeScript, micro-frontends, and GraphQL integrations used in large-scale production systems.

Guided cross-team architecture decisions and platform evolution across telecom, finance, and retail organizations.

TECHNICAL SKILLS

Developer Experience & Platform	Reusable component libraries, shared front-end frameworks, platform patterns, AI-assisted engineering workflows, developer enablement
APIs & Integrations	REST, GraphQL, OpenAI APIs, BFF patterns, enterprise API integrations
Front-End	React, Next.js, TypeScript, JavaScript (ESM), Redux, Micro-Frontends
Cloud & DevOps	AWS, Azure, CI/CD pipelines, release automation
Testing	Jest, Cypress, Playwright, Cucumber
Programming	TypeScript, JavaScript, Python

EDUCATION

MCA — Computer Applications — IGNOU | B.Sc. Mathematics & Economics — Kurukshetra University
