Summary

Senior Frontend Engineer with 20+ years of experience building scalable enterprise web applications, AI-powered interfaces, and data-intensive dashboards for financial services and other large-scale industries. Expert in React, Next.js, and TypeScript, delivering interactive analytics, chat-driven workflows, and component-based UI systems. Proven ability to translate business requirements into production-quality SaaS solutions through scalable frontend architecture, strong stakeholder collaboration, and measurable business impact.

Skills

- **Frontend Engineering**: React, Next.js, TypeScript, JavaScript, Redux, Micro-Frontends, Component Libraries
- **Styling / UI Systems**: Tailwind CSS, CSS Modules, Mantine, Chakra UI, Ant Design, Shadcn/UI, Design Systems
- **APIs & Backend:** REST, GraphQL, Java, SQL
- **Data Visualization**: Recharts, D3.js, Chart.js, Interactive Dashboards
- **AI-Assisted Development**: LLMs, AI-assisted workflows, Copilot-style interfaces, prompt engineering, Sapient Slingshot, GitHub Copilot
- **Testing**: Jest, React Testing Library, Cypress
- **Performance & Optimization**: Lighthouse, SpeedCurve, Core Web Vitals, WAVE, AudioEye, Responsive Design
- **Cloud & DevOps**: AWS, Azure, GCP, GitHub Actions, Jenkins

Experience

Publicis Sapient | Irvine, California
Frontend Architect | 10/2018 – Current
Current Project: *AI Product UI Engineering | GMR Platform*

- Partnering with stakeholders and platform teams to identify workflow friction, translate business needs into technical solutions, and shape AI-driven frontend experiences for enterprise support use cases.
- Designed and built AI-powered user interfaces, including chat-driven workflows and copilot-style experiences, to improve user efficiency and reduce reliance on manual troubleshooting.
- Built interactive analytics dashboards and visualization layers using Recharts and D3.js, enabling users to analyze complex data and make faster, data-driven decisions.
- Drove adoption of AI-assisted development workflows using Sapient Slingshot and automated code-generation approaches, reducing UI development effort by ~30% and accelerating delivery cycles.
- Presented working solutions and interactive demos to stakeholders, helping communicate complex AI concepts, influence product direction, and align technical solutions with business needs.

Broader Role Responsibilities

- Led architecture and development of modular web applications for Fortune 500 clients, supporting scalable, high-traffic enterprise platforms across multiple teams.
- Delivered data-intensive UI solutions for financial services clients including Capital Group, Franklin Templeton, Empower, and Citigroup, building scalable dashboards and analytics interfaces using Recharts and D3.js.
- Partnered with business stakeholders, product teams, and engineers to gather requirements, translate workflows into technical specifications, and define scalable frontend and platform solutions aligned to business objectives.
- Translated Figma and product designs into scalable, production-ready interfaces aligned with usability, accessibility, and business requirements.
- Built configurable dashboard and analytics interfaces using reusable visualization patterns to support different business workflows and reporting needs.
- Contributed to reusable component libraries, internal documentation, and cross-team knowledge sharing to support consistent delivery across distributed teams.

- Designed AI-driven user experiences leveraging LLMs for intelligent workflows, dynamic response generation, and more intuitive user interaction patterns.
- Owned end-to-end feature development from concept and design handoff through implementation and delivery.
- Optimized web application performance, reducing page load times by ~20% and improving overall user experience quality.
- Built scalable design systems to improve UI consistency, accelerate delivery, and support maintainable frontend development across teams.
- Led cross-functional collaboration across engineering, product, and design, aligning technical execution with product goals and roadmap direction.

Publicis Sapient | Irvine, California
Senior UI Engineer | 08/2011 - 10/2018

- Led frontend development for a financial services platform, building scalable single-page applications that improved usability, responsiveness, and overall performance.
- Integrated frontend applications with backend services and enterprise systems, supporting operational workflows and business-critical functionality.
- Improved accessibility and consistency across applications by implementing reusable UI patterns and adhering to accessibility standards.
- Introduced testing and CI/CD practices that improved release quality and reduced regression issues.
- Partnered with design teams to translate product and UX designs into high-quality, production-ready interfaces.

Fidelity International | Gurgaon, Haryana
Consultant | 01/2005 - 08/2011

- Developed financial dashboards and data visualization tools using D3.js and other charting libraries, enabling stakeholders to interpret investment data and make informed decisions.
- Built financial applications and reporting interfaces that improved data visibility and supported business decision-making.
- Translated business requirements into scalable technical solutions aligned with financial workflows.

Education

B.S. in Computers, Mathematics and Economics — Kurukshetra University
